

# FYDO Clinic Update - 13/06/2024

## Patient Stats Report

If a user tries to run the **Patient Stats Report** for any data that falls outside the restrictions assigned to them, in **Settings > User**, they will now be shown a pop up of the categories they **do** have access to.

The image consists of two screenshots from the FYDO Clinic system. The top screenshot shows the 'Patient Stats' report interface with a 'Report' pop-up dialog. The pop-up contains the following text:

**Report**

Your profile only shows reports for the following:

- Doctors: Murphy, Shaun
- Theaters: Day Program

An 'OK' button is at the bottom right of the pop-up. A red arrow points to the pop-up from the right. The background shows various filters for the report, such as 'Medicare Number', 'Deceased', 'Archived', 'DVA Number', 'Indigenous', 'Referral Expired', 'Preferred Doctor', 'Health Fund', 'Sex', 'Gender', and 'Survey'.

The bottom screenshot shows the 'Settings > USERS > 7 - SHAE' page. The 'User Details' section includes fields for ID (7), First Name (Shae), Surname (Darr), Email, Raise Ticket From, Raise Ticket Location, Group (Administration), Restrict IP, and SSO Mandatory. The 'Access' section, highlighted with a red rounded rectangle, includes fields for Doctors (Murphy, Shaun), Rooms (Select rooms...), Theatre (Day Program), and Locations (Select location...). Below these fields, a note states: 'Selecting certain Doctors / Rooms / Theatres / Locations will restrict access for this user to the options that are selected.'

# API Key

FYDO now has the ability to provide multiple API Keys, eliminating the need for third parties to share keys. Each API Key now includes a user field where facilities can label the user of each key. This enhancement improves control over disabling third party access and quickly identifies those that possess a key.

The screenshot displays the 'SECURITY' settings page in the FYDO interface. The 'General' tab is selected, and the 'Webhooks' checkbox is checked. A red rounded rectangle highlights a table with 10 rows for managing API keys. Each row contains an 'API key' input field, a green 'Generate ApiKey' button, and a 'User' input field. Below this table, the 'Two Factor Authentication' section is visible, featuring options for 'Remember for 30 days', 'Communication Option' (set to 'Both Email or SMS'), 'Enforce 2FA via App', and 'SSO as Mandatory'.
