

[FYDO Hospital Update - 04/06/2026](#)

DRG Version 12 Update

DRG Version 12 is now available as an option in FYDO. Along with the DRG version update, we have also updated the TurboGrouper to the latest version to ensure compatibility.

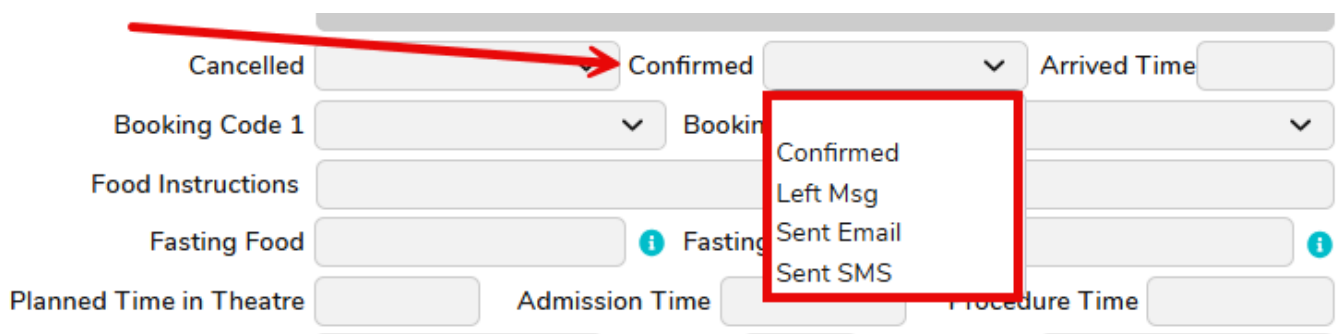

Just a reminder that the DRG version, in the Coding Screen, will automatically default based on the setup against the health fund in Settings, and should be set in line with what is outlined within your health fund contracts.

SMS Improvement

Previously, if an Automated SMS had already been sent for a particular appointment date, and a new appointment was then created within that same timeframe, the scheduled Automated SMS would send immediately for the new booking.

To give users more control over when this is sent, the **Confirmed** field is now displayed on the **Make Appointment** screen.

This allows users to select the appropriate confirmation status while creating the booking. For example, selecting **Confirmed** at the time of scheduling will prevent the Automated SMS from being sent immediately, where applicable.

Performance Optimisation

Additional performance improvements have been implemented across FYDO, resulting in a more efficient and responsive user experience.
