FYDO Hospital Update – 06/03/2026

SMS Improvement

FYDO has implemented validation warnings to help prevent SMS messages from being sent to invalid mobile numbers.

When sending an individual SMS to a patient with an invalid phone number entered, FYDO will trigger a pop-up notification to ensure the user is aware that the SMS cannot be sent.

For SMS messages sent via automation, if the recipient's mobile number is invalid, an email notification will be issued to the contact configured under **Settings > System Configuration > SMS Account**.

Arrears Report Enhancement

We have enhanced the underlying reporting framework for the Arrears Report, bringing it in line with the modern architecture used across other FYDO reports.

This change improves report performance and consistency, while supporting our broader initiative to modernise and standardise reporting across the platform.

1st of March Updates

The **1st of March Prescribed List of Medical Devices Update** has now been implemented in FYDO. This includes updated fees and the **Expiry as of** date has also been imported for discontinued Other Service Items.

The **1st of March National Procedure Banding Update** will be implemented in FYDO tonight (6th of March 2026).
