FYDO Hospital Update – 09/05/2025

Patient Alerts Flag

The **Patient Alerts Flags**, generated from **Preadmit**, can now be added to **Custom Views** on the **Appointment Screen.** This feature allows staff to easily see items that have triggered alerts while patients complete their online admission forms. Once added to a Custom View, simply hover over the icon to view the alert details.

Cancelling Theatre Bookings

Facilities can now **Cancel** entire **Theatre Bookings** in one action using a new feature that allows all episodes **linked** to a specific Theatre Booking to be cancelled simultaneously.
Users can select a **Cancellation Reason** from the drop down, which will be applied to all linked Episodes. This is a time-saving feature where an entire doctor's list needs to be cancelled.
This feature also works in reverse, allowing entire lists to be reinstated if needed.

Arrears Report API

A new **API** is available to obtain information from the **FYDO Arrears Report.**
