

[FYDO Hospital Update - 10/07/2026](#)

New Food Instructions

FYDO has introduced a new **Food Instructions** option within **Settings**, allowing you to create a list of predefined dietary requirements for inpatients, such as *Pureed*, *Liquidised*, and other specific meal instructions.

These predefined options will automatically populate as a drop-down list within the **Edit Appointment** screen, while still allowing users to free-type additional instructions if required. After selecting a predefined option, you can also add further information to provide more detailed dietary requirements.

A new permission has also been added under **Settings > User Groups** (Setting Hospital) for **Food Instructions**. This permission will default to **Read/Write (RW)** for existing users.

Food Instructions

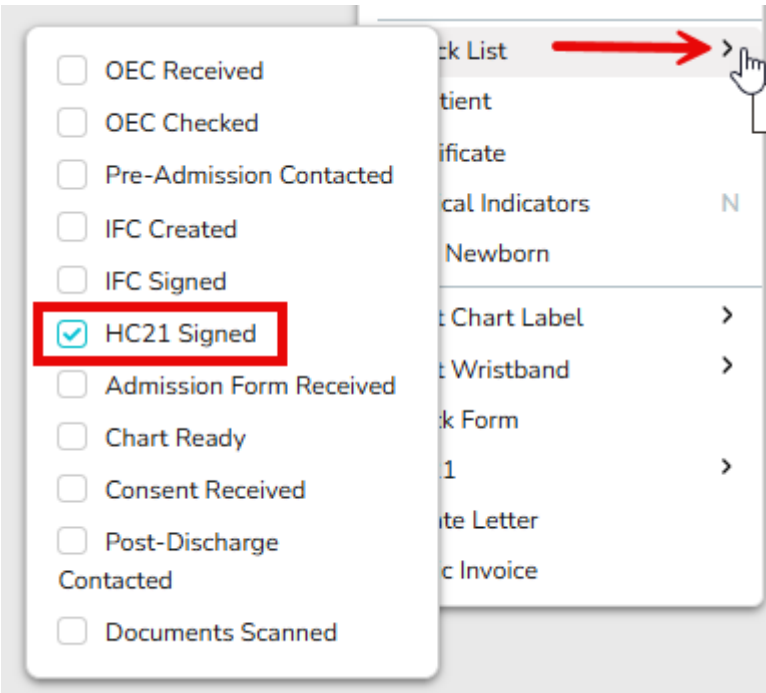

HC21 Signed Tickbox

The **HC21 Signed** process has been enhanced to further streamline patient admissions and reduce the need for manual data entry.

When a patient completes and submits their **HC21 form** through **Preadmit**, the **HC21 Signed** checkbox will now be automatically selected within FYDO. This automation ensures the system

accurately reflects that the required form has been completed, eliminating the need for staff to manually update the patient’s record.

Appointment Report Improvement

The **Appointment Report** has been enhanced with the addition of two new columns in the **Excel - Raw Data** export: **Estimated Discharge** and **Estimated Length of Stay**. These can be located in column:

- Estimated Discharge: **AS**
- Estimated Length of Stay: **AT**

AS	AT
EstimatedDischarge	EstimatedLOS

These new fields provide greater visibility into each patient’s expected admission duration and anticipated discharge date, making it easier to monitor patient stays, assist with planning, and support reporting requirements.
