

# FYDO Hospital Update - 23/04/2026

## Document Improvement

When a document is imported, scanned, edited, or a new letter is created, the system will now automatically populate the doctor field once an admission date is selected.

The screenshot shows a form for document import with the following fields and options:

- Document Name: Discharge Instructions
- Document Type: (dropdown menu)
- Doctor: EYES, Bright (dropdown menu)
- Admission: 1273 (dropdown menu)
- Checklist:
  - IFC Created
  - IFC Signed
  - Admission Form Received
  - Consent Received
  - Documents Scanned

Buttons: Cancel, Save Import

Annotations: A red box highlights the 'Doctor' and 'Admission' fields. A red arrow points from the 'Admission' field to the 'Doctor' field.

## API Update

The previously communicated API page size cap and rate limit restrictions have been implemented. Further API changes will be taking place in the near future that will also require hospitals involvement/feedback. Further information on this will be communicated in the coming weeks.
